Commentary

- September Fund Performance:** The Fund again delivered a pleasing annualised return, at 10.08% (RBA + 5.73%) in September. LVR was up marginally to 64.8%. As we reiterate monthly, the fund's diversity metrics are critical context to how we see the funds return performance, with stronger diversity meaning higher quality earnings. In September the loan and borrower count rose to 49 (+3) and 34 (+1) respectively, across 9 discrete geographic regions. Maximum individual loan and borrower concentrations fell to 8.8% respectively as foreshadowed in August.

Maintaining and seeking to continuously improve these metrics remains a key focus for the Manager in delivering the fund's returns.

Private Credit Market in Focus: There has been much reporting regarding private credit in the last months, increasing particularly since the failure of large Sydney based developer Bathla. Whilst Ark has no direct exposure to the Bathla collapse, we've fielded many investor queries and observed investors heightened concern in terms of committing their funds, which frankly is perfectly natural.

One thing seemingly being ignored by many commentators is that in Australia, private credit loans are typically real property, where the PC lender holds first mortgage security. This means Bathla's lenders with that first mortgage security over a particular property have a right to take control of the property, to realise its value and repay its investors.

Commentary Continued

Of critical importance when advancing loans is the quality and voracity of the independent valuation obtained. We can only speak for ourselves but the diligence we put into interrogating external valuations is significant, and probably the most fundamental element of the due diligence we undertake. Assuming others do the same, we would expect most of Bathla's private credit lenders will recover their investors' funds.

But one thing is highlighted by the Bathla collapse, namely the criticality of hard-edged due diligence on borrowers and sponsors personally, on their financial position and their "true" past performance, and on the contractors they engage to deliver their projects – all key pillars in Ark's DD process.

- **Ark and Bedrock's Loan Type allocation:** The fund's investments continue to be strongly weighted toward land and civil construction (sub-division) loans (70%), with 4% in completed property (investment property and residual stock) loans, and 12% in non-complex industrial and commercial built form loans.

14% of the portfolio is exposed to residential built form, comprising 4 strongly performing townhouse development loans in well-located infill suburbs in Adelaide and Brisbane.

- **Loans in arrears:** Two Bedrock investments remain in interest arrears and in the Manager's hands as we enforce the security; Newport (NSW) and Box Hill (Melbourne). Newport is progressing toward third-party refinancing with full capital and normal interest recovery expected in coming months. Box Hill continues to progress under a mortgagee-led strategy, with full capital repayment also expected in coming months.

ABOUT THE FUND MANAGER

Ark Capital is a boutique property fund manager established in 2015, specialising in private real estate debt and equity, and led by owners and executives with long experience through numerous credit and property development cycles.

Ark's primary business is its Ark Wholesale Mortgage Fund, a contributory fund originating mid-market syndicated loans, primarily to property developers and development land investors. Throughout its 10+ year history Ark Capital has transacted over 200 real estate loan and equity deals valued at over \$1.5 billion.

Ark's executive team has long experience in the important disciplines, including property development, project and loan due-diligence, loan execution, investment management, default management and recovery, and funds management.

Preservation of investor capital is the key principle around which our risk analysis process is built, and around which our approval committee's decision making is centred. Informed by external research and market analyses developed and delivered bi-annually by Urbis, we continually recalibrate Ark's investment settings to avoid the riskiest segments and regions in the market. This laser focus on risk is behind Ark's 99.6% recovery of investor's capital over our 10+ year history.

Due Diligence: To protect investor capital we rigorously, meticulously assess every aspect of a borrower's proposed project, the borrower's background, their contractors, advisors and consultants, their financial position and performance, the markets they develop in and sell into, and the security they are providing. Our screening process sees us typically reject approximately 75% of loan opportunities we assess.

Ark Capital has a growing family of loyal investors encompassing family offices, high net wealth investors, and increasingly, financial advice firms and wealth management firm clients attracted by our performance, transparency and a growing suite of investment products designed to meet their needs.

ABOUT THE BEDROCK FUND

Bedrock was created to offer a "pooled" version of Ark's Wholesale Mortgage Fund to our investors, to provide an investment diversity option for our investors seeking to avoid concentration risk.

Bedrock invests exclusively in Ark Wholesale Mortgage Fund loans, in syndicate alongside other contributing investors. Bedrock takes positions in multiple loans in order to deliver an ever-reducing concentration risk as measured by the portfolio standard deviation, and essentially making it a proxy for the greater Ark Capital investment universe.

Bedrock's diversity targets include increasing the number of loans, limiting single borrower exposure, and spreading investments across multiple regions and development sectors. The portfolio is constantly calibrated to deliver its returns with as much diversity as is practicable.

Bedrock's investments include a minimum 85% 1st mortgage loans with up to 15% able to be invested in subordinated loan positions. The Fund Manager's judicious use of subordinated loan positions has added approximately 70 basis points to Bedrock's YTD annualised returns.

Bedrock's returns are determined by reference to the interest rate paid by borrowers on the loans, plus a 1% rebate from the Fund Manager of its line fee income on the loans, less the Fund Manager's 0.75% fee and direct costs capped at 0.25%.
